Revision History 7

Emergency First Actions

Situation	First action
Immediate danger, fire, serious medical emergency, or crime in progress	Call 911 in the United States or 112/999 in Ireland, then alert Security and Workplace when safe.
Fire alarm or evacuation order	Leave immediately by the nearest safe exit; do not use elevators; go to the posted assembly point.
Severe weather or shelter order	Move to the posted interior shelter area, away from windows, and monitor BluePeak alerts.
Suspicious package	Do not touch, move, open, or use a radio or phone close to it; clear the area and contact emergency services/Security.
Threatening behavior or active violence	Escape if possible, hide and secure the area if not, call emergency services when safe, and defend yourself only as a last resort.
Work-related injury	Obtain urgent care first; notify the manager and Workplace as soon as possible and no later than 24 hours.
Lost device or suspected cyber incident	Contact Security immediately; do not wait for the general incident form.

Emergency judgment: Protect life and safety before property, deadlines, or approvals. Employees acting in good faith during an emergency will not be disciplined for leaving work, contacting emergency services, or declining an unsafe instruction.

1. Purpose and Scope

BluePeak is committed to a safe, healthy, secure workplace for employees, contractors, visitors, and customers. This document defines responsibilities and response procedures for BluePeak offices, company events, business travel, customer locations, and approved remote workspaces.

Site postings, emergency instructions, building-management directions, and local law may impose more specific requirements. During an incident, follow emergency services and designated incident leaders even when those directions differ from routine practice.

2. Safety Responsibilities

2.1 All Employees

Employees must follow training and posted rules, use equipment safely, maintain clear exits, report hazards, wear required protective equipment, avoid horseplay or unsafe shortcuts, and cooperate with drills and investigations. No one should perform a task they reasonably believe presents imminent danger without pausing and escalating it.

2.2 Managers

Managers plan work safely, address reported hazards, ensure required training, support injury reporting and medical care, avoid retaliation, and contact Workplace or Security rather than improvising beyond their competence. A manager may not discourage a workers' compensation report or require an employee to use PTO for a potentially work-related injury before review.

2.3 Workplace and Security

Workplace maintains site plans, inspections, first-aid resources, evacuation maps, drills, and building coordination. Security manages threat assessment, access control, emergency communication, incident command support, and liaison with law enforcement. Site wardens assist with evacuation and accountability but do not replace emergency services.

3. Emergency Contacts and Sites

Site	Address and main line	Primary assembly guidance
Denver Headquarters	1801 Wewatta Street, Suite 900, Denver, CO 80202; +1 303 555 0140	Use the posted Union Station district assembly location and check in with the floor warden.
Austin Office	500 West 2nd Street, Suite 1200, Austin, TX 78701; +1 512 555 0186	Use the posted Republic Square assembly location and check in with the floor warden.
Dublin Office	1 Windmill Lane, 4th Floor, Dublin 2, D02 F206; +353 1 555 0190	Use the posted Windmill Quarter assembly location and check in with the floor warden.

Emergency numbers and assembly points are also posted near exits and in the Employee Portal. Assembly locations may change because of construction, weather, or emergency-services direction; posted instructions control.

Security: security@bluepeaktech.com. Workplace: workplace@bluepeaktech.com. For a non-emergency building issue, use the Workplace Help form. Do not use email as the first channel for imminent danger.

4. Emergency Notification

BluePeak uses SMS, voice, email, Teams, and portal banners for emergency or closure notices. Employees must keep a current mobile number and emergency contact in the HR system and should acknowledge an alert when requested.

An alert may direct evacuation, shelter, remote work, delayed opening, travel restriction, system shutdown, or employee accountability. Do not forward an internal alert publicly unless Communications or emergency services authorizes it. Contact family only after reaching safety and following critical instructions.

5. Evacuation and Fire

When an alarm sounds or evacuation is ordered:

- 1 Stop work and leave belongings that would delay exit.
- 2 Use the nearest safe stairwell or exit; never use an elevator unless emergency services direct it.
- 3 Assist a person with an agreed evacuation plan when safe; do not lift or carry without training.
- 4 Close doors behind you when practical; do not lock them.
- 5 Go to the posted assembly area and check in.
- 6 Do not re-enter until emergency services or the authorized incident leader gives clearance.

Employees should know two exit routes. Fire extinguishers are for trained employees and very small incipient fires only; evacuation is always acceptable. Never block fire doors, stairs, sprinklers, or extinguishers.

Visitors should remain with their host when safe. Reception maintains the visitor log for accountability.

6. Shelter-in-Place and Severe Weather

A shelter order may be issued for tornado, severe storm, hazardous material release, civil disturbance, or an external threat. Move to the designated interior room or lowest safe level, away from glass and exterior walls. Bring a phone only when immediately available and silence it when instructed.

For earthquake shaking, drop, cover, and hold on; after shaking stops, assess hazards and evacuate if directed. During flood, wildfire smoke, extreme heat, snow, or ice, follow site-specific alerts and do not travel when it would be unsafe.

Workplace may close or delay a site. Employees who can work remotely should follow the notice and manager direction. A closure does not require an employee to work when power, connectivity, dependent care, evacuation, injury, or another emergency makes work impractical; communicate when able.

7. Medical Emergencies and First Aid

Call emergency services for loss of consciousness, difficulty breathing, chest pain, severe bleeding, suspected stroke, seizure lasting more than five minutes, serious allergic reaction, major trauma, or any condition that appears life-threatening.

Send someone to meet responders and retrieve an automated external defibrillator when available. Only trained employees should provide first aid beyond basic assistance. Do not move an injured person unless remaining creates greater danger.

Employees may voluntarily disclose an emergency action plan or request accommodation through People Operations. Medical information is confidential and shared only as needed for safety and administration.

8. Workplace Violence, Threats, and Harassment

Weapons, physical violence, stalking, threats, intimidation, deliberate property damage, and conduct that creates a credible safety risk are prohibited, subject to applicable law. Report concerning behavior early to Security, Employee Relations, or a manager. A report may involve a coworker, former worker, customer, vendor, domestic partner, visitor, or unknown person.

Security uses a multidisciplinary threat-assessment process and may adjust access, provide escorts, contact emergency services, preserve evidence, or establish a safety plan. Employees should not investigate or confront a potentially dangerous person.

During active violence, use the principles Escape, Hide, Defend:

- 1 Escape by the safest available route when possible.
- 1 If escape is not possible, hide, lock or barricade, silence devices, and stay out of view.
- 1 Defend yourself only as a last resort against imminent harm.

When police arrive, keep hands visible and follow instructions.

9. Suspicious Package, Hazardous Material, and Utility Failure

Do not touch a suspicious package, unknown powder, leaking container, exposed wire, gas odor source, or damaged battery. Clear the immediate area, avoid creating sparks, and contact emergency services or building security. Do not use elevators during a suspected fire or gas event.

For power, water, elevator, HVAC, or internet failure, follow building instructions. Do not attempt electrical, mechanical, or elevator rescue work. Workplace will determine closure or relocation.

10. Injuries, Illnesses, and Near Misses

After urgent care, report a work-related injury, occupational illness, ergonomic concern, exposure, or near miss to the manager and Workplace as soon as possible and no later than 24 hours. Reporting supports care, workers' compensation review, hazard correction, and legal records; it is not an admission of fault.

The report should state what occurred, when and where, people involved, immediate care, witnesses, and known hazard. Do not include unrelated medical history. Workplace and People Operations will explain claim forms and approved medical processes.

BluePeak prohibits retaliation for reporting an injury, hazard, unsafe instruction, or safety concern. Employees must cooperate with reasonable investigation and corrective actions.

11. Ergonomics and Office Safety

Arrange monitor height, seating, keyboard, pointing device, lighting, and frequently used items to reduce strain. Take brief posture and eye-focus changes during the day. Use a step stool rather than a chair, keep walkways clear, manage cables, store heavy items low, and request help moving equipment.

Only trained personnel may perform electrical work, access restricted equipment rooms, or use specialized tools. Report damaged furniture, overheating devices, swollen batteries, trip hazards, water leaks, blocked exits, or indoor-air concerns promptly.

12. Remote-Work Safety

Remote employees must maintain a designated workspace with safe electrical connections, stable furniture, adequate lighting, clear exit, and reasonable ergonomics. Household members, pets, and personal activity should not create foreseeable risk around equipment or confidential work.

A work-related injury in the approved remote workspace should be reported under the same 24-hour standard. BluePeak may request photos or a virtual assessment focused on the work area, with reasonable privacy notice. Employees are not expected to permit unannounced home inspection.

During a local emergency, protect personal safety and follow public authorities. Notify the manager when practical and do not continue work merely to remain online during evacuation or danger.

13. Travel and Customer Locations

Employees working at a customer, conference, or other site must follow that location's safety rules in addition to BluePeak policy. An employee should stop work and contact the BluePeak manager when a local instruction appears unsafe or inconsistent with law.

Travelers should review destination guidance, maintain emergency contacts, and report significant incidents. The Travel Policy governs disruption support and evacuation arrangements.

14. Emergency Preparedness and Accessibility

Each employee should review site exits, assembly areas, shelter rooms, and alert settings. Employees who may need assistance during evacuation or shelter should contact People Operations or Workplace for an individualized plan. Volunteers receive only the information needed to provide assistance.

Site teams conduct periodic drills. Treat every alarm as real unless an authorized notice clearly identifies a test. Participation is required unless a disability, customer-critical operation, or emergency-service direction requires an alternate process.

15. Business Continuity

Incident leaders prioritize life safety, then communication, critical customer services, data protection, facilities, and orderly recovery. Employees may be directed to work remotely, use an alternate site, suspend noncritical work, or follow a manual procedure.

Only designated Communications, Legal, Security, or executive personnel may speak for BluePeak to media, regulators, law enforcement, or the public. Employees should preserve records and avoid speculation on social media.

16. Post-Incident Support

After a serious event, BluePeak may provide EAP counseling, manager guidance, time away, medical support, security planning, transportation, or workplace adjustments. Participation in a debrief should be respectful and focused on learning, not blame. Confidential reports and investigation materials are shared on a need-to-know basis.

90. Administration, Exceptions, and Questions

BluePeak administers workplace safety and emergency response consistently with the employee's work location, employment classification, written employment terms, and applicable law. A statutory or contractual entitlement that is more generous than this document will apply to the extent required. A manager may not waive a legal requirement, create a new benefit, or promise an exception without written approval from the document owner.

Employees should raise questions before relying on an informal interpretation. Contact workplace@bluepeaktech.com through Outlook or the People Help channel in Microsoft Teams. Payroll, Legal, Information Security, or a site leader will be consulted when the question involves tax, wage-and-hour, privacy, immigration, safety, or local-law considerations.

Approved exceptions must identify the employee, the policy provision, the business reason, the approving authority, the start and end date, and any conditions. Exceptions are stored with the employee or transaction record and do not establish a precedent for other employees.

91. Related Documents and Systems

Resource	When to use it
Employee Wellness Program	EAP, mental-health, ergonomic, and resilience resources.
Hybrid Work Policy	Site attendance, closures, and hybrid workspace responsibilities.
Remote Work Policy	Home-workspace safety, location, and emergency displacement.
Information Security Policy	Cyber incident, device loss, and business continuity controls.
Travel Policy	Traveler safety, assistance, and disruption response.
